NGUYEN TAN NINH

Full-stack .NET Developer | .NET, Angular / React, Enterprise Systems & AI-assisted Delivery

Ho Chi Minh City, Vietnam (GMT+7) • Open to remote roles — EU / APAC overlap

ninh.nguyen.code@gmail.com • +84 966 622 483 • tanninh.id.vn • github.com/leesanhoon • linkedin.com/in/leesanhoon

SUMMARY

Full-stack developer with 6+ years building and modernising .NET backends and web / mobile front ends for banking, e-commerce and travel-booking platforms serving millions of users. Led two full legacy migrations — .NET Framework to .NET Core and SOAP/WCF to REST — with measurable latency gains and zero business disruption. Currently building an enterprise CRM for a Vietnamese commercial bank on .NET 10, ABP microservices and Angular, delivered with a self-built team of AI coding agents working under human review.

TECHNICAL SKILLS

Languages: C#, SQL (T-SQL), TypeScript, JavaScript

Backend: .NET 10 / .NET Core, ASP.NET Core Web API, ABP Framework, microservices, Entity Framework Core, RESTful API design, SOAP / WCF, background & scheduled jobs

Security: role-based and record-level access control, maker-checker approval flows, Microsoft Entra ID single sign-on

Data: SQL Server — query optimisation, indexing, stored procedures, execution-plan tuning; versioned data scripts with verify and rollback

Frontend / Mobile: Angular, React, React Native (iOS / Android)

Architecture: Clean Architecture, multi-tenant services, third-party and core-system integration, legacy modernisation

Delivery: Git, Azure DevOps (Boards, Repos, Pipelines CI/CD), pull-request review, Agile; multi-agent AI coding workflows (Claude Code, Codex, GitHub Copilot)

Currently expanding: Docker, Microsoft Azure (AZ-204 in progress), Redis, automated testing

PROFESSIONAL EXPERIENCE

Full-stack .NET Developer | Utop **Sep 2026 – Present**

Enterprise sales & CRM platform for a Vietnamese commercial bank — customer 360, leads and opportunities, approvals, KPI tracking and reporting for branch and head-office staff.

- **Own the security and permissions module**: three-tier role hierarchy, record sharing rules, shared groups, maker-checker approvals and Microsoft Entra ID sign-in, on .NET 10 / ABP microservices with an Angular 21 front end.
- Deliver dynamic reporting and KPI dashboards, and moved daily report aggregation into a background job with staging tables and single-transaction promotion.
- Integrate CRM data with the bank's upstream systems through SQL Server data pipelines; ship data changes as versioned scripts with dry-run, verification and rollback steps.
- **Designed and run a team of AI coding agents** (orchestrator, backend, frontend, reviewer) on a Kanban board: agents pull Azure DevOps bugs, implement fixes, open pull requests and run QA acceptance against the design with screenshot evidence — **1,000+ tasks completed**, with human approval kept for business rules, permissions and shared-environment data changes.
- Merged around 365 pull requests through Azure DevOps CI/CD to QA and UAT in the first ten weeks.

.NET Developer | Easybook.com (Remote) **Sep 2025 – Aug 2026**

Southeast Asia's leading land & sea travel booking platform — buses, ferries, trains and car rentals across Malaysia, Singapore, Thailand and Vietnam.

- **Led the migration of the BRF partner integration from SOAP/WCF to REST APIs**, reducing API latency and cutting the effort required to onboard new transport partners.
- **Built the Kymtrans cross-border integration end to end** — a scheduled sync service for daily ticketing data plus real-time seat search and a dynamic seat map — delivered with **zero seat-allocation discrepancies in production**.
- Designed and optimised the RESTful booking APIs in .NET Core, tuning SQL Server queries, indexes and stored procedures against core high-volume booking tables.
- Delivered a competitor-intelligence data pipeline benchmarking RedBus route and location datasets, used by business development to prioritise market expansion.
- Worked fully remotely with a distributed regional team, coordinating in English through async written communication and code review.

Software Engineer / .NET Developer | MWG Group **May 2020 – Sep 2025**

Unified e-commerce platform for Thegioididong, Dienmayxanh, Bachhoaxanh and Avakid — Vietnam's largest retail group, serving millions of monthly users.

- **Led the Bachhoaxanh platform migration from .NET Framework to .NET Core**, cutting cart response time from over **2 seconds to under 500ms** and holding all requests under 300ms.
- **Re-architected a legacy codebase into a clean multi-layered service design** and built a shared Cart API serving all four retail brands from a single service.
- Delivered every major platform transition with **zero business disruption** on a revenue-critical storefront operating at national scale.
- Built and maintained the Bachhoaxanh React Native mobile app for about three years, keeping iOS/Android parity.
- Partnered daily with Product, UI/UX and QA to scope, ship and support features across web and mobile.

EDUCATION

BSc, Software Engineering | Van Lang University, Ho Chi Minh City **2015 – 2019**

LANGUAGES & REMOTE AVAILABILITY

Languages: Vietnamese (native) • English (professional working proficiency — used daily for written collaboration and code review)

Time zone: GMT+7 — full overlap with APAC and Australia; 4–6 hours of daily overlap with Central European working hours

Setup: Experienced remote worker; dedicated home office and fibre connection; comfortable with async-first culture
